

Calling all efficient aviation innovators

SOLARIMPULSE
FOUNDATION

Do you have a scalable, impactful aviation solution?

➤ Apply by June 30th

Selection into this Aviation Call for Solutions comes with tangible, concrete benefits. Whether you're looking to scale, find partners, or reach decision-makers, here's what being shortlisted unlocks for your solution.

Access to a powerful global ecosystem

Being selected opens the door to a network of 5,000+ stakeholders, including investors, corporates, policymakers, and technical experts. This isn't just a contact list, it's an **active ecosystem** where labelled solutions are supported through shortening the time **from innovation to market adoption**.

International visibility boost

Solutions benefit from exposure across the foundation's communication channels - media, events, digital platforms, and partner network leading to strong brand credibility, inbound interest from partners and companies and opportunities to position solutions in front of corporate and governmental decision makers.

Credibility through a trusted label

Once shortlisted, you'll receive personalised guidance to apply for the **Solar Impulse Efficient Solution Label**. The Label is not just symbolic, it's a rigorous validation of both: environmental impact and economic viability (real market competitiveness). This unique dual validation provides labelled solutions unique access to investors and to business and government procurement departments.

Participation in high-level events

Selected solutions gain access to exclusive flagship events like the **Pioneers Forum**, as well as tailored opportunities to showcase at major aviation events, connecting innovators with decision-makers through speaking slots, exhibitions, and networking that can lead to partnerships, pilots, or funding.

Showcase opportunities through the Climate Impulse project

Selected solutions gain benefit from exclusive opportunities linked to the **Climate Impulse project**, the pioneering initiative working to achieve the world's first long-range zero-emissions flight. Through this partnership, innovators gain access to the Climate Impulse network, connecting them with leading aviation industry stakeholders. Participants will receive exclusive insights into the Climate Impulse adventure and its technological challenges, and enjoy privileged access to key project milestones. This momentum creates a powerful platform for innovators to showcase their solutions on a global stage, reach high-level audiences seeking breakthrough technologies, and align with a landmark project shaping the future of clean aviation.
